Innovation in social networking media has revolutionized the world in 21st century. Social networking media presents potentially opportunities for new forms of communication and commerce between marketers and consumers. The objectives of this is to analyze effective communication strategy through social networking media. A survey was conducted randomly among Facebook user community, by sending questionnaire through online to collect individual opinion from the respondents. The total population is social networking user community, but to get effective data the sampling is constrained to the target population like young adults, graduates within the age of 18 to 55 years. The sampling size is five hundred. The paper presents research results and internet marketing activities that have contributed to building a relationship with the brand. It is necessary to study the effectiveness of brand communication strategy followed in social networking media, mainly accessed by Slovenian users. In recent trend of marketing in social networking sites, various brand communications are widely used to attract targeted leads. So, this study would help to know the effectiveness of communication and strategy done through social networking media which make the target audience to participate in this kind of advertising.

Key words: Internet, social networking media, fast moving consumer goods, brand, Slovenia.

INTRODUCTION

The Internet is transforming the business environment, creating new challenges and opportunities. This chapter provides an overview of the Internet and its defining characteristics, highlighting the key developments that have contributed to its explosive growth and its impact on the business environment.

In its current form, internet is primarily a source of communication, information and entertainment, but increasingly, it also acts as a vehicle for commercial transactions. Since the explosion of the web as a business medium, one of its primary uses has been for marketing. Soon, the web could become a critical distribution channel for the majority of successful enterprises. One among them is marketing and spreading brand communication through Social networking sites (Thompson, 2002).

The Internet provides the opportunity for companies to reach a wider audience and create compelling value propositions that was not possible before (example Amazon.com’s range of 4.5 million book titles), while providing new tools for promotion, interaction and relationship building. It is empowering customers with more options and more information to to make informed decisions. The Internet also represents a fundamental
shift in how buyers and sellers interact, as they face each other through an electronic connection, and its interactivity provides the opportunity for brands to establish a dialogue with customers in a one-to-one setting. As such, the Internet is changing fundamentals about customers, relationships, service and brands, and is triggering the need for new brand-building strategies and tools (Cleland, 2000).

Data from 2011 indicate that the world has currently over 2.4 billion Internet users. Visible increase in the number of users was detected in 2011, when the number of Internet users increased by 37 percent in the previous year (2010).

Internet brings new usability. Therefore, companies must also constantly be updated to follow the trend and make better exploit opportunities posed by the Internet, mobility and new technologies. Internet has become a visual and audio multimedia attraction of communication in the business world and in everyday life (Figure 1).

The distinctive characteristics of Internet can be summarised in three key points (Cleland, 2000):

1. **It Dramatically Reduces Information Costs** - the cost of searching for information and the cost of the information itself is significantly reduced (and in many cases is free).
2. **It Allows for Two-way Communication and Interactivity** - this radically alters the process of interaction between communicating parties, allowing both parties to identify each other and build one-to-one relationships - not previously available with mass medium forms of communication.
3. **It Overcomes the Barriers of Time and Space** - The Internet is a global network and can be reached from everywhere, regardless of where the computer or Internet access device is physically located. It can also be accessed at any time - 24 h a day, 7 days a week. These qualities eliminate the barriers of time and space that exist in the physical world.

These characteristics combine to create a very powerful medium. By allowing for direct, ubiquitous links to anyone, anywhere, the Internet lets individuals and companies build interactive relationships with customers and suppliers, and deliver new products and services at low cost. These defining characteristics have fuelled its explosive growth.

### Building successful brand on the Internet

Internet is changing the brand environment or "brandscape". This chapter explores new strategies and tools for building brands on the Internet, including the interactive approach to attracting customers and building loyalty.

Building a strong brand is a complex task. The brand building process starts with the development of a strong value proposition. Once this has been established, the next step is to get customers to try the brand. If the offering is developed properly, it should provide a satisfactory experience and lead to a willingness to buy again. To entice trial and repeat purchase requires triggering mechanisms, which are created through advertising, promotion, selling, public relations, and direct marketing. The company needs to communicate the values of the brand and then reinforce brand associations to start the wheel of usage and experience, and keep it turning. Through the combination of the stimulus of consistent communications and satisfactory usage and experience, brand awareness, confidence and brand equity are built. This is illustrated in Figure 2.

Traditionally, in addition to providing added value, brands were a substitute for information - a way for customers to simplify the time-consuming process of search and comparison before deciding what to buy. However, the Internet makes search and comparison much easier. This threatens to undermine the value of brands. On the other hand, the logic of the Internet cuts another way. Transactions on the Internet require provide detailed...
personal information - names, addresses, credit card numbers, etc. Generally, people have concerns about sharing personal information. In addition, the intangible nature of the Internet, and the fact that customers are buying goods that, in most cases, they have never handled or seen (except on-screen) has placed greater importance on trust and security. People only tend to transact with sites they know and trust - sites that provide a wealth of information and make comparison shopping easy, where the user feels a part of, and sites that understand the user's needs and preferences. This highlights the surfacing of information and relationships as key sources of added value in the Internet economy. Customers derive added value through the provision of information on the products or services they buy, as well as on topics of interest related to the brand and product characteristics. Traditionally, brands have been developed in an environment whereby a company creates a brand, and projects it onto a third party intermediary (the media). In response, many unnamed customers develop a "relationship" with the brand. The Internet, on the other hand, offers interactivity, whereby the company can establish a dialogue and interact with individual customers on a one-to-one basis. In doing so, a company can listen, learn, understand and relate to customers, rather than simply speaking at customers. This creates the opportunity for companies to build stronger relationships than previously attainable. However, this also poses a challenge as these relationships may take on a life and character of their own (Cleland, 2000). The differences between the traditional approach and the one-to-one approach are outlined in Table 1.

The Internet gives companies control over all their interactions with customers and therefore, brand-building must focus on the end-to-end customer experience - from the promises made in the value proposition, to its delivery to the customer. In maximising the customers' experience, companies have to find innovative ways of leveraging the information and relationship building characteristics of the Internet.

The social media

Over the last decade, social networks have changed communications, shifting the way we consume, produce and interact with information, based on explosive migration to the web. Social media websites like Facebook (FB), Twitter etc. have created huge impetus on the communication platform with the end customers of different products and services that was lacking in the traditional medium. Social networking sites are used as marketing tool by marketers in creating brand relationship. Huge growth of customer base enables marketers to explore social media networking sites as new medium of promoting products and services and resulting in reduction in clutter of traditional medium advertising of reaching the mass customers and not realizing the actual ROI. Social networking sites are more collaborative and interactive compared to traditional media followed by marketers.

Social media advertising is a paid form of brand, service or business promotion and requires a proper and planned communicative message and budget.

Advertising is customer centric in nature. Customers play an important role in any major or minor communication because they are the ones who are going to decide the fate of the advertising communication. Some benefits of social network advertising include (Jothi et al., 2011):

1. Popularizing your brand, idea or service to the target group.
2. Informing target audience about your brand or service present in the market.
3. Encouraging healthy competition in the market.
4. Providing social benefits for the brand.
5. Making the audience to interact and keep them intact with the brand.

Advertising on internet provides a major contribution to brand competition in the market. Advertising here not only provides information about a product or service but also promotes innovation. Besides, it also facilitates customers' satisfaction. Big and small companies, individuals of all walks of life, major and minor events, concepts, etc., nowadays lay their base on social network advertising to get recognized in the market (Zarrella, 2010).

Facebook, Twitter etc. have become a personal product and corporate branding hub in the world. Every brand that exists on social networking sites has the same core features and benefits, such as the ability to create a page, share resources, add multimedia and much more (Eric, 2008). The effective brand communication strategies are analyzed to find the impact among the users.

Emerging trends in social media in Slovenia

Today Internet is widely spreading as a communication media in Slovenia. Emergence of the information super highway has revolutionized the way media is created and consumed. Previously, media used to be created by media firms who are the content generators as well as the content owners. And the content used to broadcast to the consumers by the media. This concept has undergone an elementary change; now anyone can create content best known as User Generated content and share it with others using platforms like Blogging, Social Networks, YouTube etc. Now the consumers of the media have converted into media creators and the content also distributed on the internet through social networking and people connect with this content through comments. Social networking has become more popular among everyone. Consumers are getting more connected and communication with their networks and technology allows them to voice their opinions rapidly.

Today Slovenian consumers can make use of facilities like E-banking-retailing-shopping etc. with more confidence and trust as never before. Internet has proved to be more than just emails and Google search. With the advent of networking media, broadband and Web 2.0 now many people are joining the social networks like Facebook, Twitter and thus it is easier for the marketers to spread the word about them over the network. To bridge the gap between the consumers, organization, marketing and media planning people there is the need of uniformity and trust in the social media. Social media, community networking, blogging, twitting, etc. were beyond anticipation for large mass of people. E-Shopping and E-bookings, E-learning and online dating have achieved good heights and become popular among Slovenian consumers.

Another area of opportunity for building brand is viral marketing. Viral marketing, also known as word-of-mouth (WOM) or “buzz marketing”, is the tactic of creating a process where interested people can market to each other (Subramahi and Rajagopalan, 2003). Implementing an effective viral marketing strategy is a good way to get people talking about your business. A successful viral marketing campaign can be developed through social networking media like Twitter, Facebook etc. With the information available on online network the marketers have the knowledge of the needs and wants of different
level of customers. Word-of-mouth is a particularly powerful medium, as it carries the implied endorsement from a friend. The Internet, with its e-mail lists, web sites, chat rooms and bulletin boards, makes communication tighter, and word-of-mouth even more effective. As a result, viral marketing is an effective tool in getting a message out fast, with a minimal budget and maximum effect. If a company can provide a strong enough incentive for customers to share their lists of personal contacts, whether for communications or community, they will have a powerful viral opportunity at their disposal. A good virus will look for prolific hosts (such as students) and tie into their high frequency social interactions (such as e-mail and messaging).

Next chapter provides some information about leading Slovenian brand in the category of fast moving consumer goods. The chapter also provides a mix of activities that has been carried out as part of marketing campaign by using social networking media.

**MATERIALS AND METHODS**

The objectives of this paper is to analyze the effective communication strategy through social networking media. It is important to study the effective way of communication in branding the product in social networking media and analyzing its reach among the consumers. The paper explores the consumer engagement practices adopted by social networking media for building the brand. Dialogue between consumers and the brand is presented in the paper in the case of a leading brand in the category of fast moving consumer goods on Slovenian market. So, this study would help to know the effectiveness of communication and strategy done through social networking media which make the target audience to participate in this kind of advertising. This study would help the advertisers to understand the effective communication strategy to communicate their brand among the users.

**Building successful brand by using social networking media - the case study of leading Slovenian brand in fast moving consumer goods category**

Food industry in Slovenia is one of the most competitive international branches and is in its mature stage of development. In order to maintain their competitive position on the market, companies have to constantly prove themselves by providing supplies of innovative products and processes. New products and strong brand play a very important role in this industry. It is a large and competitive industry with many active companies (Vukasović, 2012). The producers of high-volume products are aware that a company’s leading role in the market is ensured through strong and established brands and loyal consumers. Today, the labelling with brands is such a strong factor that there are hardly any products without a brand. Various literatures provide tons of advice and rules on how to create or shape a successful brand. On the other hand, decisions regarding the policy of brands are far from being straightforward and require numerous researches and considerations.

Due to data protection and providing discreet company for analyzed brand we used in this paper a brand name labelled X. So Brand X is leading Slovenian brand in the category of fast moving consumer goods, precisely in the category of chicken sausage products. In Slovenia and in the region of South-east Europe it has been an "icon" for 38 years. It is present in the market since 1974. It became first chicken pariser sausageion the European market, best selling sausage in its category. The brand X is consistent in its quality; its recipe remained unchanged from the very beginning. Brand X is a synonym for pleasure, emotions and quality. Brand X became the first customer's choice, leading brand in the region in terms of sales and market share.

Brand X personality is matching the characteristics of brand X target group – generation Y (witty, funny, dynamic, full of energy), which always needs something new and challenging. Brand name X does not bring any negative associations either regionally or by any consumer group. The Slovenian brand is considered as a trustworthy market – leader in the chicken sausage category with a lot of positive associations: packaging, reasonable price, wide product range with long tradition. Slovenian brand X stands for values like trust, safety, quality and loyalty.

Advertising campaign was designed based on irresistible desire for brand X. Basic guideline of the market communication campaign was the orientation towards consumers and their benefits. The next guideline was creativity as the most powerful marketing tool to create a brand. After defining the marketing and communicative goals and target group to which the message is intended, what followed was the stage of defining the implementation of the creative strategy. The key element of the creative strategy was humor with the core communications like "Brand X is not mad, we are mad about brand X".

Advertising campaign took place in the media in the time from 1.4. to 31.7.2012. Campaign was spread across web site for brand X, internet media with web advertising on Windows Live Messenger, 24ur.com, iklop.com, Cosmopolitan, lgre123.com, Ringaraja.net, Facebook.com, YouTube.com.

The marketing goals of the campaign were:

1. To retain 46.4% volume and 61.6% value share for brand X on an annual basis in category of poultry pariser sausages.
2. To achieve high (90%) campaign recognition by the target group.

The communicative goals of the campaign were: to increase the involvement of consumers and their engagement with the brand X, measured through key performance indicators from 1.4. - 31.7, 2012.

**Web site for brand X**

To increase the attendance of web site for brand X with basic 3.367 unique visitors and 4.581 visits in the previous three month period to 100.000 different visitors and 200.000 page views.

**Facebook**

1. Brand X activated in the Facebook environment – to increase the number of Facebook fans: from 5.882 fans before campaign to 20.000 fans after campaign.
2. to increase the level of interaction with the posts (min. 500 comments, min. 1.000 likes).
3. to increase the number of female Facebook fan (25+ years) of 100% (key decision makers on daily and weekly purchases).

**Fun club for brand X**

To acquire at least 10.000 new email contacts for future direct communication.

**Youtube**

To achieve at least 50.000 views on video for brand X. The second

phase of the campaign included different viral videos "Mad about brand X". The videos were posted on YouTube.

Research design

Methods of data collection and sample

To analyze and find the effectiveness of communication strategy to building a relationship with the analyzed brand, communication through social networking media was done with the survey method in the research.

Survey was conducted randomly among Facebook user community, by sending questionnaire through online to collect the individual opinion from the respondents.

Non probability sampling technique is used to collect the opinion from the online respondents. The total population is social networking user community, but to collect the effective data the sampling is constrained to the target population like young adults, graduates within the age of 18 to 55 years. The sampling size is five hundred.

RESULTS AND DISCUSSION

Usage of internet by the user

It has been found that 3% of audience use internet once a week, 15% of the respondents use 2 to 3 days a week. 35% of the respondents use it 1 or 2 h a day and the remaining 47% of users are accessing internet more than 3 h a day. It is understood that the new media and its technology is an emerging trend in communication which attracts almost all the people, if they have knowledge of computers. So this digital media has more snatchers towards its communication and internet is becoming part of necessary communication among Slovenian young population (Table 2). Differences in Slovenian young population usage of internet with respect to their gender and age level were verified by Chi-square analysis. Chi-square analysis showed that there were differences in population usage of internet with respect to their gender and age level. We found that men tend to use internet more often than woman. More than 58% of men and 42% of woman claimed to use internet very often (more than 3 h a day) ($x^2 = 12.586; df = 2; p = 0.002$). Further, our results suggested that 67% of the younger population (between 18 and 35 years old) tend to use internet more often than older people (33%) ($x^2 = 9.201; df = 2; p = 0.010$).

Awareness of social networking sites and internet marketing campaign for brand X

From this result, it is observed that nearly 99% of the internet users are aware of social networking sites and only 1% of them are clueless. Although the concept of computer-based communities dates back to the early days of computer networks, only some years after the advent of the internet online social networks have met public and commercial in a successive manner. At the most basic level, an online social network is an internet community where individuals interact, often through profiles that represent their selves to others (Donath and Boyd, 2004). Social networks have grown rapidly, and some like Facebook, YouTube, have achieved the mass market and penetrated in a few months since their inception; such applications have infringed their users in different strategies to interact with more people (Jothi et al., 2011). Also from this result, it is observed that nearly 96% of the internet users are aware of internet marketing campaign for brand X (Table 3). More than 72% of the young population (between 18 and 35 years old) had high level of awareness about internet marketing campaign for brand X.

Accessibility of ads in internet marketing campaign for brand X

Only 5% of the total samples say that they have never accessed or shown interest to the ads displayed in social networking sites for brand X. 85% of the respondents used to access often and were interested in listening to the advertisements for brand X, 10% of the respondents used to access sometimes and were interested in listening to the advertisements for brand X (Table 4). Today's customers want to be engaged differently than in years past and many traditional marketing tactics simply do not work anymore. Social media marketing is a revolutionary way to build solid relationships with customers long before first contact with fun, attractive messages and
Brand communication that attracts the users

Interactive fan page for brand X attracts 50% of users. 25% of users have pulled their interests towards brand X game and 20% of users listen to viral video ads, 5% of users are interested in traditional banner ads. Most of the social networking websites are enabling brands to engage the right people in the right conversation at the right time (Shih, 2009). Nowadays, communication on branding in social networking sites is more personal, contentious, fascinating and influencing among the user community (Table 5).

Impact on building brand relationship with target group

According to the respondents, 97% of user agreed that the communication strategy used in brand X communication creates impact on brand effectively and also could help it to recall the same often and interactively. The remaining respondents almost 3%, say that it does not create much impact on brand relationship but still effective for other communication purpose like sharing and chatting information (Table 6). Based on research results the target group for brand X is the young population, between 18 and 35 years old.

Key performance indicators campaign for analyzed brand

The finding of the study states that the internet marketing campaign for brand X was effective and resulted in the process of building a relationship with the brand. Key performance indicators campaign for brand X are:

1. after campaign volume market share has been raised to 48.3% and value market share for brand X has been raised to 63.7% in the category of poultry pariser sausages in Slovenian market (Nielsen, 2012)
2. the awareness of internet marketing campaign for brand X was 92%, so the campaign for brand X has been recognized.
3. we activated 178.682 unique visitors and reached 377.832 page views (Google Analytics).
4. with the mentioned marketing campaign brand X gained more than 20.000 Facebook fans; at the end of the campaign, brand X had 20.510 Facebook fans (Facebook Insights).
5. we increased the level of interaction with the posts: we had got 938 comments and 2.841 likes (Facebook Insights).
6. the number of female Facebook fans, 25+ years has increased by 431.63% (from 784 to 3.384 Facebook fans)
7. we achieved 12,212 new email contacts for future direct communication
8. we achieved 61,047 views on video "Mad about brand X" (YouTube.com Analytics).

Based on the mentioned results we can conclude that the marketing and communicative goals of the campaign for brand X were achieved.

Conclusion

With the advent of Internet technology and social media revolution it is a must for the Slovenian company to take hold of social networking websites for sales generation as well as brand promotion to achieve global competitiveness. Social networking sites users of Facebook and Twitter have become a personal product and corporate branding hub in Slovenia nowadays in digital era. Every brand that exists on social networking sites has the same core features and benefits, such as the ability to create a page, share resources, add multimedia and much more. Social networking sites are filled with potential users who are mainly young adults. They spend more time in these networking sites due to heavy commercial contents, entertainment and social gathering. So, product or service communicators are needed through their ads in these areas with more and more interactive and fascinating factors so that their brand identity is developed among the right choice of focused audience. Advertisers and brands use social networking sites as the major resource for their promotion and developing brand identity among the focused market.

This study would help advertisers to understand the effective communication strategy to communicate their brand among the users. This paper highlights the need for marketers’ presence in social media, the value that can be yielded from a well-designed internet marketing campaign and strategies for penetrating into the new media segment.
